

MISSISSIPPI NURSES EARN CERTIFICATION IN INFECTION CONTROL

Madison, Miss. (February 19, 2016) – Thirty-two registered nurses in Mississippi completed the arduous requirements to earn a Certification in Infection Control (CIC®). The Mississippi Hospital Association would like to congratulate the following healthcare workers for obtaining this prestigious certification. We appreciate your commitment to infection control in healthcare settings.

Earning a CIC® designation shows a commitment to best practices in infection prevention and control and improved patient care. It also signals to employers and colleagues a personal commitment to professional growth.

Staff who become certified in Infection Control and Epidemiology contribute greatly to the health and wellness of patients, visitors and staff at their healthcare facilities.

Infection Preventionists also positively impact quality scores, NHSN data reporting, reimbursements and Healthcare Acquired Infection rates.

The National Commission for Certifying Agencies accredits the Certification Board of Infection Control and Epidemiology (CBIC), which administers the certification process.
